

# Scholar Trust Architecture Design

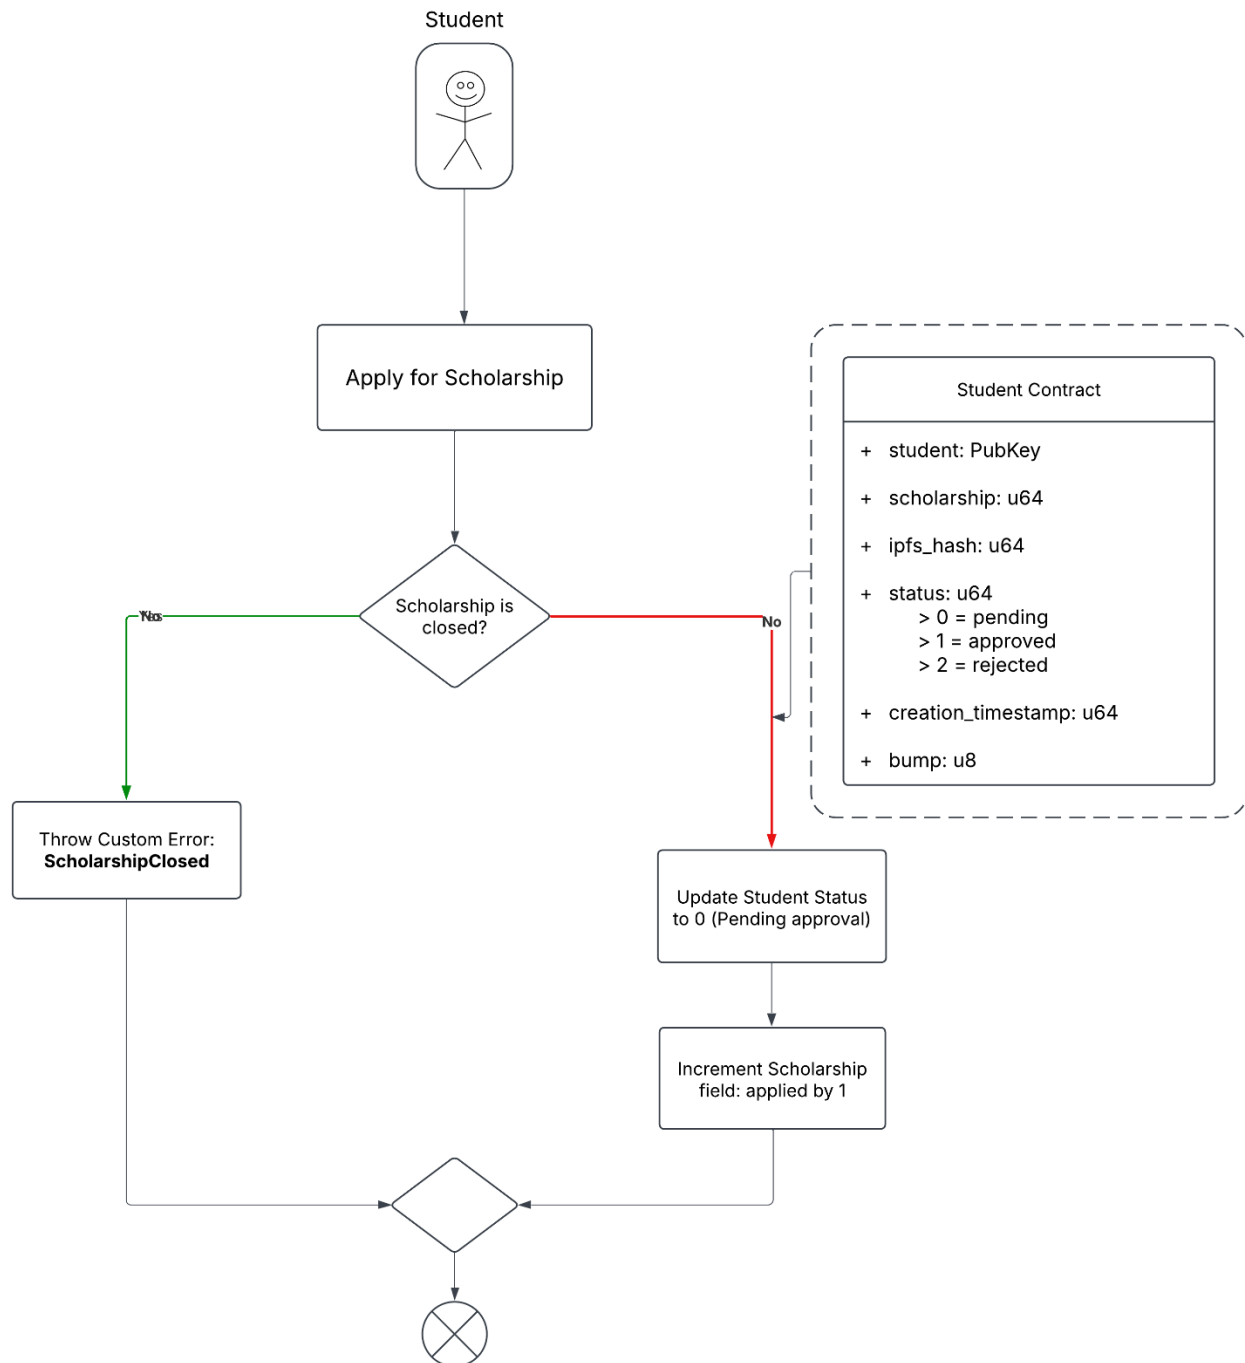

Overview:

Project Overview
<ol style="list-style-type: none"><li>1) Sponsor creates scholarship with agreed amount and application limit.</li><li>2) Student apply for scholarship with IPFS Hash containing their education certificates or credentials.</li><li>3) Sponsor approves student's application.</li><li>4) Sponsor reject student's application.</li><li>4) When approved number of students equals application limit, funds are automatically disbursed to approved students equally.</li><li>5) Scholarship account closed.</li></ol>

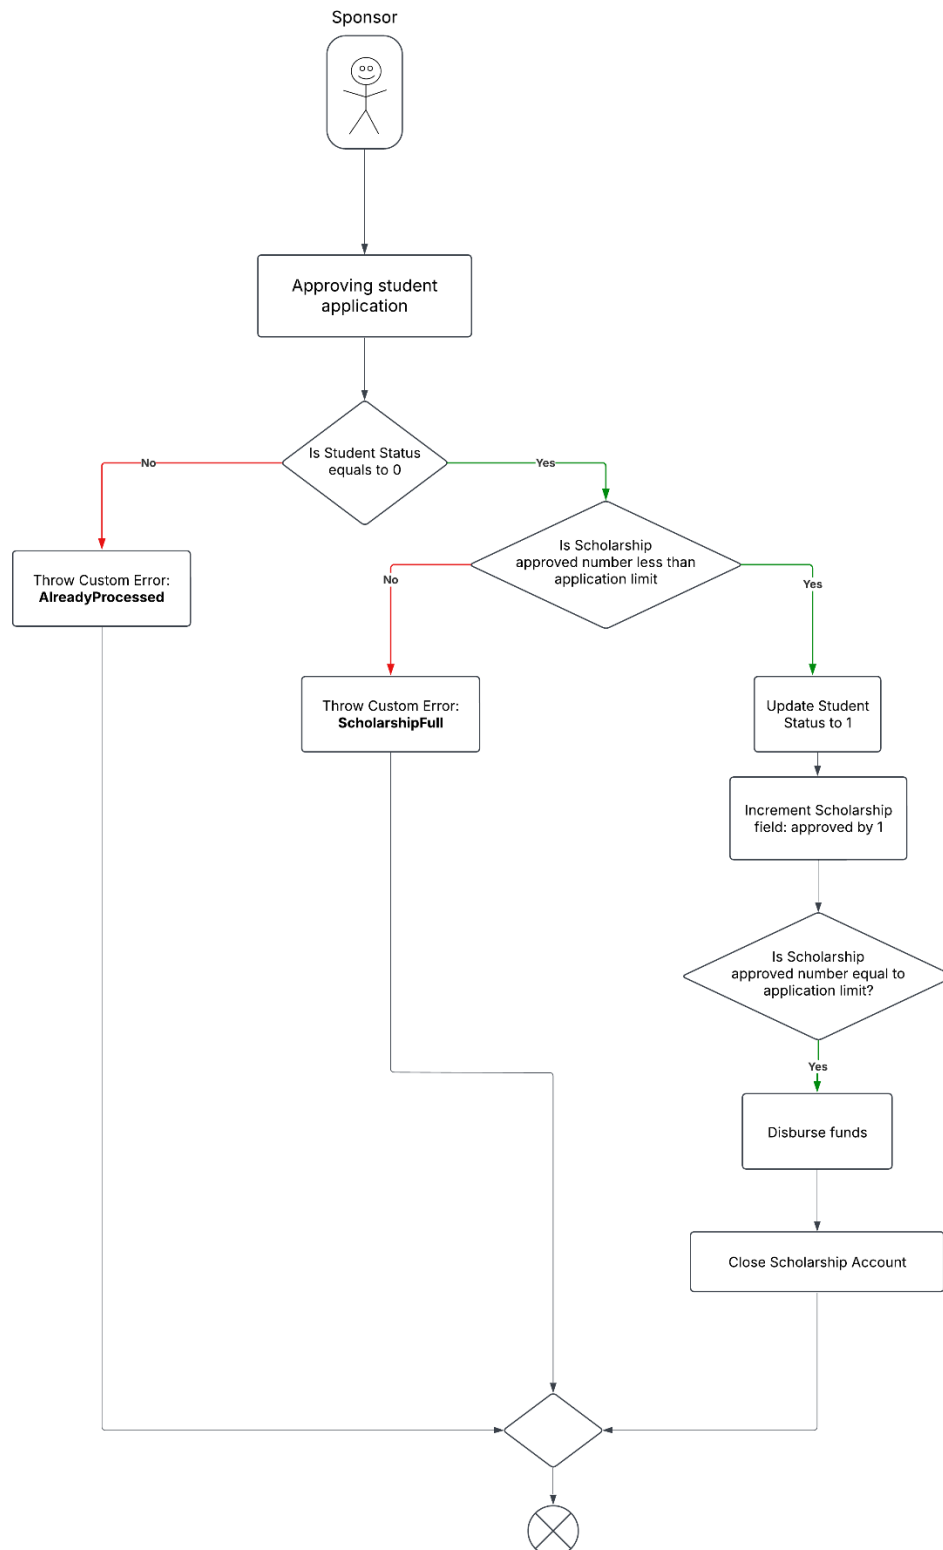

# Create Scholarship

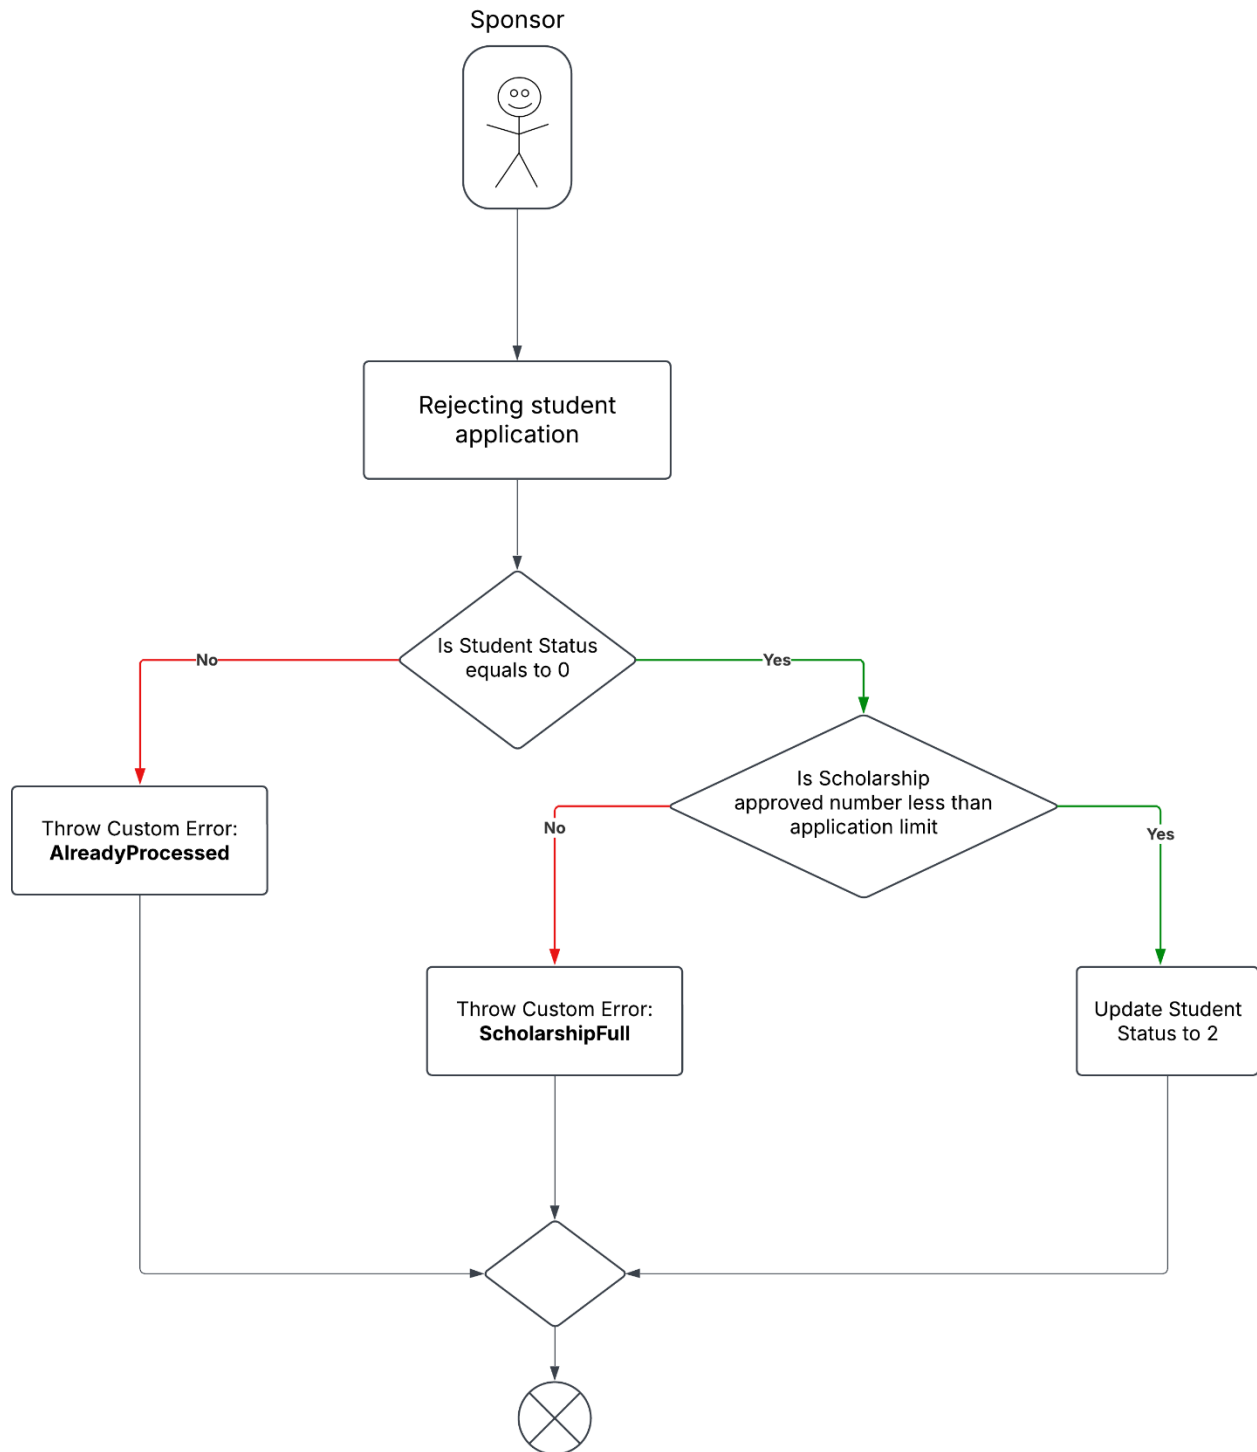

# Apply for Scholarship

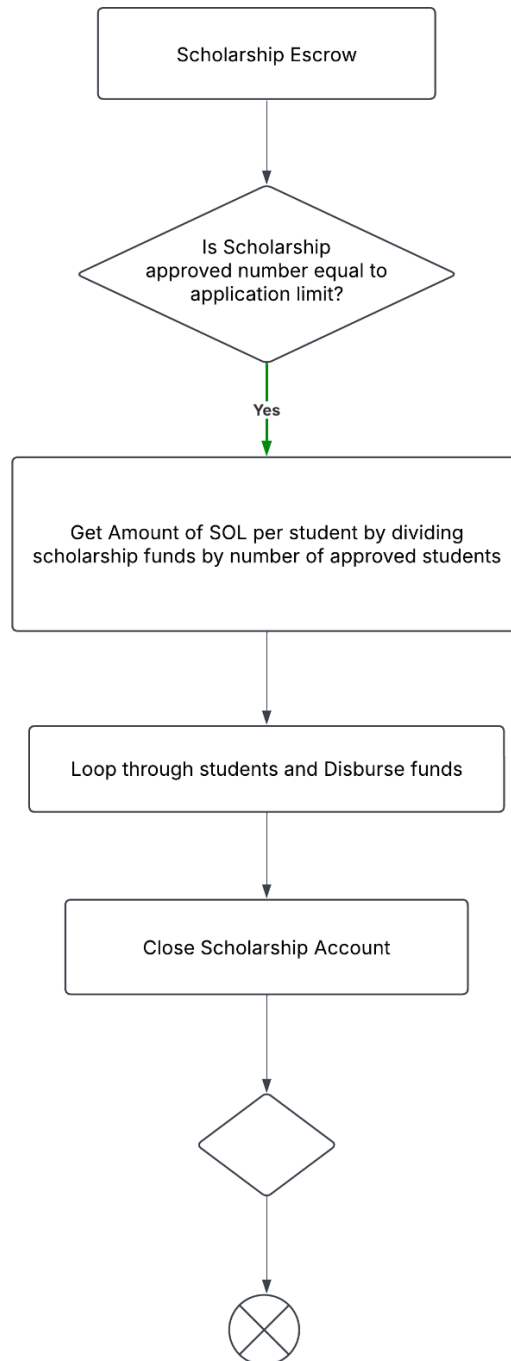

# Approve Student Application

# Reject Student Application

# Disburse Funds

## End-to-End Overview

- The sponsor creates an **escrow account** and sets the application limit and amount to be deposited.
- Sponsor deposit SOL which will be stored in a **Vault**.
- Students apply for scholarships creating a **student contract** bonded with the scholarship applied.
- Sponsor approves student application by setting student status to **1**.
- Sponsor rejects student application by setting student status to **2**.
- When the number of approved students reaches the application limit set in the escrow, the **escrow** automatically sends SOL from the **vault** to the approved student's account.
- The **escrow** account will be **closed** after disbursement.
